

Curve and Surface Fitting: Saint-Malo 2002

edited by

Albert Cohen, Jean-Louis Merrien, and Larry. L. Schumaker

Nashboro Press, Brentwood, 2003

CONTENTS

Higher Order Sparse Grid Methods for Elliptic Partial Differential Equations <i>Stefan Achatz and Christoph Zenger</i>	1
A Scattered Data Approximation Scheme for the Multidimensional Poisson Equation Using Cardinal Radial Basis Interpolants <i>Giampietro Allasia</i>	11
A Fast Wavelet Algorithm for Multidimensional Signals using Polyharmonic Splines <i>Barbara Bacchelli, Mira Bozini, and Christophe Rabut</i>	21
Near-best Discrete Quasi-interpolants on Uniform and Nonuniform Partitions <i>D. Barrera, M.J. Ibáñez, and P. Sablonnière</i>	31
Cardinal Interpolation with Biharmonic Polysplines on Strips <i>Aurelian Bejancu, Ognyan Iv. Kounchev, and Hermann Render</i>	41
Scattered Data Interpolation with Wavelet Trees <i>Christophe P. Bernard, Stéphane G. Mallat, and Jean-Jacques Slotine</i>	59
Adaptive Fitting of Scattered Data by Spline-Wavelets <i>Daniel Castaño and Angela Kunoth</i>	65
Polynomial Reproduction and the Dyadic Eigenvalues of Bi-infinite Matrices <i>Mariantonia Cotronei and Thomas Sauer</i>	79
Shape Preserving Approximation with Large Sets of Scattered Data <i>A. Crampton, S.C. Kendall, and J.C. Mason</i>	89
Triangle-based Multi-Resolution Models for Height Fields <i>Leila De Florian and Paola Magillo</i>	97
Scattered Data Coding in Digital Image Compression <i>Laurent Demaret and Armin Iske</i>	107
Characteristics of Dual Triangular $\sqrt{3}$ Subdivision <i>N.A. Dogson, I.P. Ivrišimtzis, and M.A. Sabin</i>	119
Face-Value Subdivision Schemes on Triangulations by Repeated Averaging <i>Nira Dyn, David Levin, and Jo Simoens</i>	129
Approximate Moving Least-Squares Approximation: a Fast and Accurate Multivariate Approximation Method <i>Gregory E. Fasshauer</i>	139
Bimonotonicity Preserving Surfaces Defined by Tensor Products of C^1 Merrien Subdivision Schemes <i>Françoise Foucher</i>	149
Curve and Surface Meshing for Finite Elements Applications <i>P.-L. George, P.J. Frey, P. Laug, and H. Borouchaki</i>	159
New Families of Wavelets on the Interval <i>Laura Gori, Laura Pezza, and Franscesca Pitolli</i>	177

Classification and Construction of Bivariate Subdivision Schemes <i>Bin Han</i>	187
Ternary and Three-point Univariate Subdivision Schemes <i>M.F. Hassan and N.A. Dodgson</i>	199
Additive Sparse Grid Fitting <i>Markus Hegland</i>	209
Web-Spline Methods in Linear Elasticity <i>Klaus Höllig, Jörg Hörner, and Andreas Kopf</i>	219
Subdivision Rules for General Meshes <i>I.P. Ivrișimțzis, K. Shrivastava, and H.-P. Seidel</i>	229
On Interpolating Thin Plate Tension Splines <i>Boris I. Kvasov</i>	239
An Efficient Algorithm for Solving Linearized SVM Regression Problems <i>D. Lei, A. Crampton, J.C. Mason, and C. Ross</i>	249
A Family of 4-point Dyadic Multistep Subdivision Schemes <i>Daniel Lemire</i>	259
Scattered Data on Homogeneous Manifolds: the Norming Set Approach <i>Jeremy Levesley, Carl Odell, and David L. Ragozin</i>	269
Radial Basic Functions from the Perspective of Splines <i>Will Light</i>	279
Smooth Ternary Subdivision of Triangle Meshes <i>Charles Loop</i>	295
Denoising Signals on a Random Design <i>Voichița Maxim</i>	303
Texture Segmentation Using Stable Texture Features <i>Sylvain Meignen and Valérie Perrier</i>	313
Smoothness of a Nonlinear Subdivision Scheme <i>Peter Oswald</i>	323
A Multiresolution Method for Detecting Higher Order Discontinuities from Irregular Noisy Splines <i>M. Randrianarivony and G. Brunnett</i>	333
A de Boor Type Algorithm for Tension Splines <i>Mladen Rogina and Tina Bosner</i>	343
Artifacts in Recursive Subdivision Surfaces <i>Malcolm Sabin and Loïc Barthe</i>	353
Some Properties of C^1 Surfaces Defined by Tensor Products of Merrien Subdivision Schemes <i>Paul Sablonnière</i>	363
A Factored Interpolatory Subdivision Scheme for Quadrilateral Surfaces <i>Scott Schaeffer and Joe Warren</i>	373
Characterization of Semi-Hilbert Spaces with Application in Scattered Data Interpolation <i>Tobias Werther</i>	383
Interpolatory Subdivision Schemes Generated by Splines <i>Valery A. Zheludev, Amir Z. Averbuch, and Marina Gruzd</i>	393

Curve and Surface Design: Saint-Malo 2002

CONTENTS

Bivariate Knot Selection Procedure and Interpolation Perturbed in Scale and Shape <i>Mira Bozzini and Licia Lenarduzzi</i>	1
Automatic Semi-regular Mesh Construction from Adaptive Distance Fields <i>P.-T. Bremer, S.D. Porumbescu, B. Hamann, and K.I. Joy</i>	11
On Chung and Yao's Geometric Characterization for Bivariate Polynomial Interpolation <i>J.M. Carnicer and M. Gasca</i>	21
A Unified Framework for Cubics and Cycloids <i>J.M. Carnicer, E. Mainar, and J.M. Peña</i>	31
Rational Interpolants with Tension Parameters <i>Giulio Casciola and Lucia Romani</i>	41
Surface Fitting Validation Using Regression Analysis <i>T. Chaperon</i>	51
Shape-constrained Smoothing with Inf-convolution Cubic Splines <i>C. Conti, R. Morandi, and C. Rabut</i>	61
Constrained Interpolation by Frenet Frame Continuous Quintics <i>Paolo Costantini, Isabella Cravero, and Carla Manni</i>	71
Constrained Bivariate Histosplines <i>Paolo Costantini and Francesca Pelosi</i>	83
Constrained Interpolation in \mathbb{R}^3 by Abstract Schemes <i>Paolo Costantini and Maria Lucia Sampoli</i>	93
Fast Surface and Tree Structure Extraction of Vascular Objects in 3D Medical Images <i>Thomas Deschamps and Laurent D. Cohen</i>	103
Controlling the Shape of the Error in Cubic Ellipse Approximation <i>Tor Dokken</i>	113
Minkowski Combinations of Complex Sets: Geometry, Algorithms, and Applications <i>Rida T. Farouki</i>	123
Spatial C^2 PH Quintic Splines <i>Rida T. Farouki, Carla Manni, and Alessandra Sestini</i>	147
Simplification of Terrains by Minimization of the Local Deformation <i>Pascal J. Frey and Houman Borouchaki</i>	157
Approximate Parameterization of Planar Cubics <i>Johannes Gahleitner, Bert Jüttler, and Josef Schicho</i>	167
Surface Interpolation by Means of Convex Combinations <i>Cédric Gérot, Dominique Attali, and Annick Montanvert</i>	177
Triangular SBR-Surfaces with Base Points <i>Olivier Gibaru</i>	187

On an Algorithm for Bernstein Polynomials <i>Heiner Gonska and Alexandru Lupaş</i>	197
A Hierarchical Structure for Locating Intersections in Large Sets of B-spline Curves <i>Eric Guilbert, Eric Saux, and Marc Daniel</i>	205
Triangulating Point Clouds with Spherical Topology <i>Kai Hormann and Martin Reimers</i>	215
Spline Implicitization of Planar Curves <i>Bert Jüttler, Josef Schicho, and Mohamed Shalaby</i>	225
Near-Interpolation to Arbitrary Constraints <i>Scott N. Kersey</i>	235
Construction of Cubic 3D Spline Surfaces by Lagrange Interpolation of Selected Points <i>N. Kohlmüller, G. Nürnberger, and F. Zeilfelder</i>	245
Optimal Approximation Order of Interpolation by Cubic Spline Surfaces <i>N. Kohlmüller, G. Nürnberger, and F. Zeilfelder</i>	255
Parameterizing Complex Triangular Meshes <i>Géza Kós and Tamás Várady</i>	265
Smooth Iso-Surface Extraction from Tetrahedral Grids <i>Ulf Labsik and Günther Greiner</i>	275
Fluid Flow Visualization Based on Space Curve Theory <i>Zhenquan Li and Gordon Mallinson</i>	283
Surface Completion of an Irregular Boundary Curve Using Concentric Mapping <i>William Martin and Elaine Cohen</i>	293
A Recursive Method for the Construction of Tensor Product Hermite Interpolants <i>A. Mazroui, D. Sbibih, and A. Tijini</i>	303
Hierarchical Computation of Bivariate Hermite Interpolants <i>A. Mazroui, D. Sbibih, and A. Tijini</i>	315
Adaptive Mesh Extraction Using Simplification and Refinement <i>Adelailson Peixoto and Luiz Velho</i>	325
On the Optimality of Piecewise Linear Max-norm Enclosures Based on Slefes <i>Jörg Peters and Xiaobin Wu</i>	335
Tree-based Triangle Mesh Connectivity Encoding <i>Christian Rössl, Ioannis Ivrissimtzis, and Hans-Peter Seidel</i>	345
Non-Optimal Parameterizations and User Control <i>Alla Sheffer</i>	355
Geodesic Curvature Flow on Parametric Surfaces <i>Alon Spira and Ron Kimmel</i>	365
Spatial Geometric Interpolation <i>G.D. Vassilatos, A.I. Ginnis, and P.D. Kaklis</i>	375
Arc-Length Parameterized Spline Curves for Real-Time Simulation <i>Hongling Wang, Joseph Kearney, and Kendall Atkinson</i>	387
Robust and Efficient Computation of the Closest Point on a Spline Curve <i>Hongling Wang, Joseph Kearney, and Kendall Atkinson</i>	397
The Sylvester Resultant Matrix for the Bernstein Polynomials <i>Joab R. Winkler and Ronald N. Goldman</i>	407
